

## ABSTRACT OF THE INVENTION

The invention relates to a collapsed umbrella with shrunk volume,  
5 which is provided with a joint having wide base for pivoting with second  
rib and third rib counted from outside respectively. As the second rib  
and the third rib are positioned in collision, they can be received side by  
side without collocate when the umbrella is closed. Hence the collapsed  
umbrella will be shrunk effectively when it is closed.
